Teaching

2026 **Introduction to hidden Markov models (HMMs)**
Hidden Markov Models using R. Provides R code exercises that demonstrate how to fit hidden Markov models to different bio-logging data, such as GPS and accelerometers.

2022 **FW 5051: Analysis of Population**
Bayesian modeling using JAGS. Regulation, growth, and general dynamics of populations. Data needed to describe populations, population growth, population models, and regulatory mechanisms.

2019, 2021 **EEB 3407/5407: Ecology**
Principles of ecology from populations to ecosystems. Applications to human populations, disease, exotic organisms, habitat fragmentation, biodiversity, and global dynamics of the earth.

2021 **EEB 1961: Foundations of Biology Lab I**
Students develop a variety of laboratory skills and learn to think critically about experiments and research. Students practice following prescribed protocols, developing testable questions, designing experiments, and communicating their findings. Students learn about multiple research areas available within the course, and choose one area to specialize in for the second half of the semester.

2018 **STAT 3601: Data Analysis**
Nature and objectives of statistical data analysis, exploratory and confirmatory data analysis techniques. Some types of statistical procedures: formulation of models, examination of the adequacy of the models. Some special models; simple regression, correlation analysis, multiple regression analysis, analysis of variance, use of statistical computer packages.

2018 **STAT 1601: Intro to Statistics**
Scope, nature, tools, language, and interpretation of elementary statistics. Descriptive statistics; graphical and numerical representation of information; measures of location, dispersion, position, and dependence; exploratory data analysis. Elementary probability theory, discrete and continuous probability models. Inferential statistics, point and interval estimation, tests of statistical hypotheses. Inferences involving one and two populations, ANOVA, regression analysis, and chi-squared tests; use of statistical computer packages.
